Test Environment is the setup in which testing is performed. It includes hardware, software and network configurations required for testing. In the case of an **Automated Facebook web application login using Selenium with Java project**, the test environment can be divided into the following.

For example, in the case of an Automated Facebook web application login using Selenium with Java project, the test environment should have the following:

Hardware : Laptop - Acer gateway, 4GB Ram and 250 GB Rom.

Software : Web browser - Chrome browser

Operating system – Windows 10

Software tool for testing – Selenium

Network : Internet connectivity – Hotspot 5G

Data : User data is User name – XXXXX and User password – YYYYY.
